this is the first book in a new series materials research and engineering devoted to the science and technology of materials materials research and engineering evolves from a previous series on reine und angewandte metallkunde pure and applied metallurgy which was edited by werner koster until his eightieth birthday in 1976 although the present series is an outgrowth of the earlier one it should not and cannot be regarded as a continuation there had to be a shift of scope and a change in presentation as well metallurgy is no longer an isolated art and science rather it is linked by its scientific basis and technological implications to non metallic and composite materials as well as to processes for production refining shaping surface treatment and application thus the new series materials research and engineering will present up to date information on scientific and technological progress as well as on issues of general

relevance within the engineering field and industrial society premiering the new series the present book by dieter altenpohl gives the reader a very general outlook in fact a position analysis of materials and the materials industry within the framework of our contemporary technological environment it ventures moreover to forecast the changes affecting this pattern in a dynamic interdependent world this may be an unusual way to start a scientific series it is believed nevertheless to be an appropriate one
